| | Summary of Changes |
|------------------------------------|---|
| December 21, 1998 Version 1.0 | Initial release. |
| January 7, 1999 Version 3.3 | Fixed footer to read PA867IU Added additional types of quantity qualifiers to satisfy Co-generation needs – this allows reporting of the meter receiving quantity from the co-generation site. Added Clarification to use of Power factor. Clarified use of QTY/MEA segments in the Interim Account Services Summary Loc ("SU"). |
| February 10, 1999 Version 3.4 | Corrected to include REF segment for meter type in BO, PM, BQ, IA, and IB loops. This is needed to report interval size. Add D8 as an option for DTM06 in the SU loop. This is needed for the Interim Solution when interval data is not being sent. If interval data is being sent, DTM06 must be set to DT. |
| August 10, 1999 Version 3.5a | Initial changes for version 4010 Added NJ and Delaware (Delmarva) to the document |
| September 8, 1999 Version 3.5b | Added Note clarifying use of explicit date/timestamp with every interval for Pennsylvania. Added note clarifying use of BB loop (required in PA, optional in NJ/DE (Delmarva Formatting changes Changed all headers to the true X12 definition correcting some mistakes that were missed in the upgrade from Version 3070 to Version 4010. Also corrected the Table on Page 4 to reflect X12 definitions and added the words "X12 Structure" to the title on that page. |
| September 15, 1999 Version 3.5c | Added QTY01=96 in PM, BQ, and IB loops to indicate when quantity reading is provided for a period outside of the actual billing period. This is used when a comparalways sends an entire day's worth of readings, but not all readings on the start date and end date are within the current bill period. Removed Timestamp and Zone from the DTM in location 020 in all loops. Only the Date is used in this location. The Date, Time, and Zone are valid for all DTM segment in position 210. Added clarification as to what document will be used by each Pennsylvania utility when the 4010 changes are implemented in November 1999. |
| October 1, 1999 Version 3.5d | Added REF*BLT and REF*PC for PA. Note: Due to the late date this is being added, all companies may not be able to comwith it until some later date. Note: The use of these segments will have to be discussed in NJ and DE (Delmarva) Made BB loop mandatory for New Jersey and Delaware |
| November 4, 1999 Version 3.6 | This is a FINAL version for Pennsylvania and New Jersey |
| April 20, 2000 Version 3.6MD1 | Add Table of contents Add Data Dictionary Add Maryland to document Update PA use of 867 document for interval |
| June 26, 2000 Version 3.6MD2 | Corrections to TOC Corrected some data types in data dictionary Added clarity to some of the data dictionary fields Added clarity to PTD loops on relevance of "use" column |
| August 14, 2000 Version 3.6MD3 | Add New Jersey Notes section Add Note for PSE&G on BPT07 Add clarity to PTD segments in regards to the "Use" within the segments in that specific loop. |

| September 10, 2000 Version 3.7 | This transaction is a new FINAL version for Pennsylvania, New Jersey, Maryland, and Delaware (Delmarva only). |
|---------------------------------------|---|
| October 19, 2001 Version 3.7rev01 | Incorporate Delaware Electric Coop (DEC) information for Delaware Incorporate PA Change Control 030. Add clarity when canceling a transaction that only specific loops are required: for interval ACCOUNT level - BB and SU; for interval METER level – BB and BO |
| December 13, 2001 Version 3.7rev02 | Incorporate PA Change Control 038 – change all references of PPL to PPL EU. Incorporate PA Change Control 038 – change PPL EU's use of the 867IU Add clarification to NJ Notes section for PSE&G regarding support of detail interval data (summary level not an option). Also add PSE&G clarification on cancel / rebills for supplier other than supplier of record. Remove note indicating PSE&G does not support cross reference to the 810. |
| January 9, 2002 Version 4.0 | Incorporate SMECO specifics for MD (MD Change Control 003) This transaction is a new FINAL version for Pennsylvania, New Jersey, Maryland, and Delaware. |
| May 2004 Version 4.0.1D | Allow combined interval / non-interval meters on one transaction for NJ |
| August 4, 2004 Version 4.0.2.D | Review current PA practices for sending interval data – all changes made to the Pennsylvania Notes section |
| January 20, 2006 Version 4.0.3D | Incorporate NJ Change Control 005 (NJ CleanPower program changes). Add N1*G7 segment. Incorporate NJ Change Control 006 (Update txn to reflect current practices) |
| October 23, 2006 Version 4.0.4D | Incorporate NJ Change Control 008 to reflect NJ CleanPower – unmetered usage for RECO) Incorporate NJ Change Control 009 to reflect NJ CleanPower change for partial usage. Add clarifying notes for NJ Net Metering. |
| February 12, 2007 Version 4.0.5F | Considered FINAL for PA and NJ |
| February 22, 2009 Version 4.0.6D | Incorporate NJ Change Control PSEG-E-IU to reflect PSEG will send REF*45 as applicable. Allow sending of REF*6W for channel for net metered accts |
| January 24, 2010 Version 4.1 | This transaction is a new FINAL version for Pennsylvania, New Jersey, Maryland, and Delaware. |
| September 8, 2010 Version 4.1.1D | Incorporate PA Change Control 060 – (PA Admin/Cleanup) Incorporate MD Change Control – Admin (Admin/Cleanup for MD) |
| February 28, 2011 Version 5.0 | This transaction is a new FINAL version for Pennsylvania, New Jersey, Maryland, and Delaware. |
| February 16, 2012 Version 5.01 | Incorporate PA Change Control 77 (Add QTY01 Codes) Incorporate PA Change Control 82 (Add/update QTY01 Codes) Incorporate MD Change Control 010 (PEPCO AMI/Smart Meter Support) |
| March 8, 2013 Version 6.0 | Moving to v6.0 to align versions across all transaction sets Cleaned up references to Allegheny and APS throughout document Incorporated PA Change Control 103 (uniform net meter consumption reporting) Incorporated MD Change Control 016 (add BC loop for MD use) Removed IA/IB loops, region confirmed not used. |
| March 17, 2014 Version 6.1 | Incorporated PA Change Control 105 Update2 (clarify net meter bank rollover) Incorporated PA Change Control 109 (clarify use of BQ loop) Incorporated PA Change Control 111 (clarify PECO use of BPT04) Incorporated MD Change Control 018 (clarify multiple meter exchanges) Incorporated MD Change Control 024 (PEPCO new CIS) Incorporate MD Change Control 028 (BGE support for 867IU) Incorporate MD Change Control 029 (uniform net meter data reporting) Incorporate NJ Change Control 031 (RECO removal from IG) |

| | Incorporate NJ Change Control 032 (PSE&G admin updates) |
|----------------------------------|--|
| | |
| February 18, 2015 Version 6.2 | Incorporate NJ Change Control Electric 033 (remove BR and PL loops) Incorporate MD Change Control 036 (clarify net meter customer excess generation) |
| February 5, 2016 Version 6.3 | Incorporate PA Change Control 125 (Duquesne meter level support) Incorporate PA Change Control 127 (Clarify PA Notes for net meter bank rollover) Incorporate MD Change Control 42 (Clarify MD Notes for net meter bank rollover) |
| March 14, 2017 Version 6.4 | Incorporate PA Change Control 131 (Add DTM328 to identify data increment change) Incorporate PA Change Control 133v3 (Uniform Daylight Savings Time Reporting) Incorporate NJ Change Control Electric 039 (Uniform Daylight Savings Time Reporting) Incorporate MD Change Control 046 (Uniform Daylight Savings Time Reporting) |
| May 18, 2018 Version 6.5 | Incorporate MD Change Control 048 (clarify Billed Demand reporting) Incorporate PA Change Control 147 (Add Citizens & Wellsboro to IG) Incorporate NJ Change Control Electric 040 (PSEG Cancel/Rebill process change |
| March 22, 2019 Version 6.6 | Corrected Table of Contents page numbering Incorporate NJ Change Control Electric 048 (NJ Note – End of Clean Power Choice) Incorporate MD Change Control 056 (Clarify BGE Historical Usage in MD Notes) |
| March 31, 2020 Version 6.7 | Incorporate PA Change Control 150v3 (FirstEnergy PA net meter data reporting) Incorporate MD Change Control 059 (Add new PTD*BJ loop to EDI 867IU to identify generation transferred, banked or for true-up) |
| March 25, 2021 Version 6.8 | Incorporate PA Change Control 158 (Add new MEA04 to MEA*CO) Incorporate NJ Change Control Electric 053v4 (Add support for PTD*BJ loop) Incorporate PA Change Control 160 (Correct MEA04 values) |
| April 30, 2024 Version 6.0 | Incorporate MD Change Control 080 (Add support for SCB) |

General Notes LDC Definitions: The term LDC (Local Distribution Company) in this document refers to the utility. Each state may refer to the utility by a different acronym: EDC - Electric Distribution Company (Pennsylvania, Delaware) LDC – Local Distribution Company (New Jersey) EC - Electric Company (Maryland) ESP Definitions: The term ESP (Energy Service Provider) in this document refers to the supplier. Each state may refer to the supplier by a different acronym: EGS – Electric Generation Supplier (Pennsylvania) TPS - Third Party Supplier (New Jersey) ES – Electric Supplier (Delaware) ES – Electricity Supplier (Maryland) Renewable Energy The term Renewable Energy Provider in this document refers to the party that provides Renewable Energy Credits (RECs). This party does not provide generation to the account. Provider Definition: Each state may refer to the Renewable Energy Provider by a different acronym: • GPM – Green Power Marketer (New Jersey) Note: The transaction will either have an ESP or a Renewable Energy Provider, but not

Cross Reference Number between 867, 810, and 820

There is a cross reference between billing related documents.

- 867 BPT02 This document establishes the cross reference number.
- 810 BIG05 This document must have the cross reference number from the respective 867.
- 820 REF6O (letter O) When making the other party whole, the 820 to the nonbilling party must also include the cross reference number from 867/810 document.

PTD Definition and Use:

The PTD Loops are required. Some are used individually, others are used in pairs. This section describes the purpose of each PTD loop. Depending on the characteristics of the account, there may be a different number of loops.

Monthly Billed Summary Information (PTD=BB): This loop is always required for every type of account if the LDC reads the meter. See description of BB loop for applicability in each states.

Monthly Billed Summary (PTD01=BB): One PTD per Account - Data obtained from the billing system to reflect the billing data for this account.

Metered Services Information – by Meter: (PTD01 = BO and PM)

Metered Services Summary (PTD01=BO): Sums intervals by meter by unit of measure. For each meter provided in the detail, there must be one summary loop for a kwh or kvarh unit of measurement. Data is obtained from the metering system. The PTD01=BO provides control totals for the sum of all intervals in the PTD01=PM by unit of measure and meter. However, the PTD01=BO loop will NEVER be provided for kW or KVAR. For instance, if there are two meters on the account, one of which measures KW and kwh and the other of which measures kwh, there will be two PTD01=BO for the summary kwh information and three

Pennsylvania Only – the PTD01=PM will be also be looped when the interval data reporting increment changes. See DTM*328 segment and examples section for additional information.

Metered Services Detail (PTD01=PM): One or more PTDs, one for each unit of measure for each meter. Data is obtained from the metering system. Individual intervals are provided in the PTD01=PM

Pennsylvania Only – the PTD01=PM will be also be looped when the interval data reporting increment changes. See DTM*328 segment and examples section for additional information.

PTD Definition and Use: (continued)

Account Services Information – by Account: (PTD01 = SU, BQ and BP)

Account Services Summary (PTD01=SU): Summing to the account level by kWh and KVARH. Data is obtained from the metering system. For every PTD01=SU, there must be a PTD01=BQ. The PTD01=SU loop will NEVER be provided for kW or KVAR. This is typically used when the account has a Data Recorder or Load Profile Recorder, or the metering system can sum information to the account level.

Account Services Detail (PTD01=BQ): One or more PTDs, one for each unit of measure. Data is obtained from the metering system. Individual intervals are provided in the PTD01=BQ loop. If the account measures KW and kwh, there will be one PTD loop for the kwh intervals and one PTD loop for the KW intervals.

Pennsylvania Only – the PTD01=BQ will be also be looped when the interval data reporting increment changes. See DTM*328 segment and examples section for additional information.

Bill Presentment Loop (PTD01 = BP): Maryland SCB Only

One or more PTD=BP loops, one for each meter and unit of measure will be created to provide the MD SCB usage related information. Data is obtained from multiple Utility systems and provided to Suppliers to ensure all required information currently printed on Utility Invoices as well as details required to explain the Utility Charges will be available. The BP Loop is based on the meter and will be generated for each meter and Unit of measure. If consumption and generation are tracked separately there will be a BP loop for each

<u>Unmetered Services Information</u> (PTD01 = BC) – This loop is used to convey the usage for any unmetered portion of an account. This information must be provided at the summary level (PTD01=BC). [Maryland only]

Unmetered Services Summary (PTD01=BC): Total Consumption for all unmetered services at the account level. Even though some of the consumption may be estimated, the consumption is reported as actual for unmetered services. The summary is required for Unmetered Services. [Maryland only]

Generation Transferred In/Out (PTD01 = BJ) – MARYLAND & NEW JERSEY ONLY: This loop is used to convey the generation usage transferred in/out for the period. Maryland: Required if the account has net metering or is a part of an Aggregated Net Energy Metering (ANEM) Family. New Jersey: Required if the account has net metering.

Valid Loop Combinations:

There are several valid combinations of the use of the different PTD loops when EDC is the metering agent:

Combination # 1 – Interval **Account** Level Reporting (intervals are summed to ACCOUNT level)

- Monthly Billed Summary (PTD01=BB) if required by state
- Account Services Summary (PTD01=SU)
- Account Services Detail (PTD01=BQ) [not required on a cancel]

Combination #2 – Interval Meter Level Reporting (intervals are provided at meter level)

- Monthly Billed Summary (PTD01=BB) if required by state
- Meter Services Summary (PTD01=BO)
- Meter Services Detail (PTD01=PM) [not required on a cancel]

Note: For cancel transactions, the account and summary loop information is sent; however, it is optional to include the PM and BQ loops.

Order Loops are sent

The PTD loop may be sent in any order.

Daylight Savings Time (DST) Reporting

The following formats are required to report Daylight Savings Time (DST).

Spring Daylight Savings Time

60 Minute Interval Increment - Upon the change from Eastern Standard time (ES) to Eastern Daylight time (ED) at 0200, the interval ending 0300 is skipped and the interval ending 0400 is sent with a Time Code (DTM04) of ED. The Time Code 'ED' will be displayed for every reading until the fall DST where it will change to 'ES' denoting Eastern Standard time.

Example of Spring DST Change with 60-minute interval increments...
QTY-QD-95.58-KH
DTM-582-20150308-0100-ES
QTY-QD-96.9-KH
DTM-582-20150308-0200-ES
QTY-QD-86.7-KH
DTM-582-20150308-0400-ED
QTY-QD-96.9-KH
DTM-582-20150308-0500-ED
QTY-QD-97.44-KH

30 Minute Interval Increment - Upon the change from Eastern Standard time (ES) to Eastern Daylight time (ED) at 0200, the intervals ending 0230 & 0300 are skipped and the interval ending 0330 is sent with a Time Code (DTM04) of ED. The Time Code 'ED' will be displayed for every reading until the fall DST where it will change to 'ES' denoting Eastern Standard time.

Example of Spring DST Change with 30-minute interval increments...
QTY~QD~239.76~KH
DTM~582~20150308~0130~ES
QTY~QD~302.4~KH
DTM~582~20150308~0200~ES
QTY~QD~248.76~KH
DTM~582~20150308~0330~ED
QTY~QD~241.56~KH
DTM—582~20150308~0400~ED

9

15 Minute Interval Increment - Upon the change from Eastern Standard time (ES) to Eastern Daylight time (ED) at 0200, the intervals ending 0215, 0230, 0245 & 0300 are skipped and the interval ending 0315 is sent with a Time Code (DTM04) of ED. The Time Code 'ED' will be displayed for every reading until the fall DST where it will change to 'ES' denoting Eastern Standard time.

```
Example of Spring DST Change with 15-minute interval increments...
QTY-QD-239.76-KH
DTM-582-20150308-0145-ES
QTY-QD-302.4-KH
DTM-582-20150308-0200-ES
QTY-QD-248.76-KH
DTM-582-20150308-0315-ED
QTY-QD-241.56-KH
DTM-582-20150308-0330-ED
```

Fall Daylight Savings Time

60 Minute Interval Increment – Upon the change from Eastern Daylight time (ED) to Eastern Standard time (ES) at 0200, the interval ending 0200 reading is repeated. The first interval ending 0200 represents the last interval for Eastern Daylight time (ED) with a Time Code (DTM04) of ED. The second interval ending 0200 represents the initial interval for Eastern Standard time (ES) with a Time Code (DTM04) of ES. The Time Code 'ES' will be displayed for every reading until the spring DST where it will change to ED denoting Eastern Daylight time.

Example of Fall DST Change with 60-minute interval increments...
QTY*QD*54.87*KH
DTM*582*20151101*0100*ED
QTY*QD*55.62*KH
DTM*582*20151101*0200*ED
QTY*QD*54.71*KH
DTM*582*20151101*0200*ES
QTY*QD*53.46*KH
DTM*582*20151101*0300*ES

30 Minute Interval Increment – Upon the change from Eastern Daylight time (ED) to Eastern Standard time (ES) at 0200, the intervals ending 0130 & 0200 are repeated. The interval ending 0200 represents the last interval for Eastern Daylight time (ED) with a Time Code (DTM04) of ED. The second interval ending 0130 represents the initial interval for Eastern Standard time (ES) with a Time Code (DTM04) of ES. The Time Code 'ES' will be displayed for every reading until the spring DST where it will change to ED denoting Eastern Daylight time.

Example of Fall DST Change with 30-minute interval increments...
QTY-QD-18.9-KH
DTM-582-20151101-0100-ED
QTY-QD-18.63-KH
DTM-582-20151101-0130-ED
QTY-QD-19.17-KH
DTM-582-20151101-0200-ED
QTY-QD-19.44-KH
DTM-582-20151101-0130-ES
QTY-QD-19.575-KH
DTM-582-20151101-0200-ES
QTY-QD-19.17-KH
DTM-582-20151101-0230-ES

15 Minute Interval Increment – Upon the change from Eastern Daylight time (ED) to Eastern Standard time (ES) at 0200, the intervals ending 0115, 0130, 0145 & 0200 are repeated. The interval ending 0200 represents the last interval for Eastern Daylight time (ED) with a Time Code (DTM04) of ED. The second interval ending 0115 represents the initial interval for Eastern Standard time (ES) with a Time Code (DTM04) of ES. The Time Code 'ES' will be displayed for every reading until the spring DST where it will change to ED denoting Eastern Daylight time.

Example of Fall DST Change with 15-minute interval increments... QTY-QD-18.63-KH DTM-582-20151101-0115-ED QTY-QD-19.17-KH DTM-582-20151101-0130-ED

QTY~QD~19.44~KH DTM~582~20151101~0145~ED

867 Interval Usage (4010)

QTY-QD-19.575-KH DTM-582-20151101-0200-ED QTY-QD-19.17-KH DTM-582-20151101-0115-ES QTY-QD-18.9-KH DTM-582-20151101-0130-ES QTY-QD-20.115-KH DTM-582-20151101-0145-ES QTY-QD-18.36-KH DTM-582-20151101-0200-ES QTY-QD-18.765-KH

Pennsylvania Notes

What document is sent if supplier elects NOT to receive detail interval data?

If a supplier elects to receive only summary level information for an interval account, they will receive an 867MU document.

The 867IU document will be used when interval detail and summary level data is being sent. Listed below are the plans, by utility, of the information to be sent for summary and detail transaction.

- Citizens & Wellsboro will provide detail interval data using 867IU with BB, BO, PM loops. The default is summary and 867MU and is sent with BB, SU, PM (BPT04 will be "DD").
- Duquesne Will provide detail interval data using 867IU with BB, BO and PM loops. If summary level is requested, will provide an 867MU with BB, SU, and PM loops (BPT04 will be "X5").
- FIRST ENERGY Will provide detail interval data using 867IU with BB, SU, and BQ loops. If summary level is requested, will provide an 867MU with BB, SU, and PM loops (BPT04 will be "X5").
- PECO If account-level interval detail is requested, will provide using 867IU with BB, SU, and BQ loops. If meter-level interval detail is requested, will provide using BB, BO, and PM loops. Else, will provide an 867MU with BB, SU, and PM loops (BPT04 in 867MU will be "DD" for AMR monthly metered accounts and "X5" for interval metered accounts).
- PPL EU Will provide detail interval data using 867IU with BB, SU, and BQ loops. If summary level is requested, will provide an 867MU with BB and SU loops (BPT04 will be "DD")
- UGI No Interval Usage Customers

Use of date/timestamp with every interval:

All utilities provide a timestamp with each interval.

Change in Interval Data Increment

The PTD01=BQ & PM loops will be repeated when the interval data reporting increment changes. See DTM*328 segment and examples section for additional information.

Requirements for uniform support of Net Metered Customers:

Interval Metered - ACCOUNT Level Detail – all meters summarized (FE, PPL, and PECO)

BB (Monthly Billed Summary) Loop – reports the monthly billed summary usage for net metered customers.

- All PA EDCs (Excluding FirstEnergy)
 - a. When customer's consumption is greater than generation, the billed KH usage in the QTY02 will be reported as net KH (generation subtracted from total consumption).

- When customer's generation is greater than consumption, the billed usage in the QTY02 will be reported as 0 (zero) KH.
- c. In either scenario, the QTY02 will never be signed negative.
- FirstEnergy Companies
- a. Reports the consumption (delivered) KH as the billed usage SU (Account Services Summary) Loop reports the summary usage for net metered customers by unit of measure.
 - 1. All PA EDCs (Excluding FirstEnergy)
 - a. When the customer's consumption is greater than generation, the KH will be reported as net consumption (QTY01 w/actual = QD or estimated = KA) with the total generation subtracted from total consumption.
 - b. When the customer's generation is greater than consumption, the KH will be reported as net generation (actual = 87 or estimated = 9H) with the total consumption subtracted from total generation).
 - c. In either scenario, the QTY02 will never be signed negative.
 - 2. FirstEnergy Companies
 - Instead of reporting net KH in the SU loop, FirstEnergy will report the consumption and generation separately
 - Reports consumption (delivered) KH (QTY01 w/actual = QD or estimated = KA)
 - ii. Reports generation (received) KH (QTY01 w/actual = 87 or estimated = 9H)

BQ (Account Services Detail) Loop – reports the account level detail KH for net metered customers and will be looped for each unit of measure.

- 1. All PA EDCs (Excluding FirstEnergy)
 - The QTY02 will report the net KH for ALL metered services being summed to the account level.
 - If the net KH for a given report period is generation, the QTY01 will be either '87' or '9H'.
 - c. However if the total account's customer generation is less than consumption for a single reporting period, only the net consumption is sent with QTY01 qualifier of as consumption, non-billable, incomplete, or unavailable.
- 2. FirstEnergy Companies
 - a. Will send two BQ loops, one for consumption (delivered) KH and one for generation (generation) KH
 - b. Consumption (Delivered) loop identified by REF6W = "1" with each interval reported as consumption (QTY01 w/actual = QD or estimated = KA)
 - Generation (Received) loop identified by REF6W = "2" with each interval reported as (QTY01 w/actual = 87 or estimated = 9H)
 - Generation (Received) loop will be sent even when there is no generation reported for the period.

Interval Metered – METER Level Detail – each meter reported separately. (used by Duquesne Light, Citizens & Wellsboro and PECO only if EGS requests meter detail via 814E/C)

BB (Monthly Billed Summary) Loop – reports the monthly billed summary usage for net metered customers.

- When customer's consumption is greater than generation, the billed KH usage in the QTY02 will be reported as net KH (generation subtracted from total consumption).
- When customer's generation is greater than consumption, the billed usage in the QTY02 will be reported as 0 (zero) KH. I
- 3. In either scenario, the QTY02 will never be signed negative

Requirements for uniform support of Net Metered Customers (continued):

867 Interval Usage (4010)

April 30, 2024

Version 6.9

BO (Meter Services Summary) Loop –sums intervals by meter by unit of measure. Each meter will have its own associated BO loop. Provides control totals for the sum of all intervals in the PM loops.

- When the customer's consumption is greater than generation, the KH will be reported as net consumption (QTY01 w/actual = QD or estimated = KA) with the total generation subtracted from total consumption. The meter role (REF*JH) will be Additive.
- When the customer's generation is greater than consumption, the KH will be reported as net generation (actual = 87 or estimated = 9H) with the total consumption subtracted from total generation). The meter role (REF*JH) will be subtractive.
- 3. In either scenario, the QTY02 will never be signed negative

Requirements for uniform support of Net Metered Customers (continued): PM (Meter Services Detail) Loop – SINGLE meter reporting in/out flow. The meter loop will report the meter level detail KH for net metered customers via a single meter reporting both in and out flow. PM is looped for each meter and each unit of measure.

- When the quantity for a given report period (interval reading) is generation, the quantity qualifier (QTY01) will be either '87' or '9H'. Otherwise, the QTY01 will be reported as consumption, non-billable, incomplete, or unavailable.
- 2. The QTY02 will never be signed negative
- PM (Meter Services Detail) Loops SEPARATE meters, one reporting inflow and another meter reporting outflow. The PM loop will be repeated for each unit of measure, one meter reporting consumption and one meter reporting generation. Used by PECO only.
- The meter number should be unique for each KH loop. The meter attributes for each KH loop may have different values.
- 5. The QTY02 will never be signed negative.

Banked KH adjustment for excess customer generation: Applies to PPLEU, Duquesne and UGI (PECO does NOT bank excess customer generation)

The LDC will apply excess generation KH from a prior month(s) into the billed quantity (D1) segment of the billed summary (BB) loop of the 867MU/IU transaction sets reducing billed consumption. When this occurs, the sum of the metered services (PM) loops will not equal the KH being reporting in the BB loop. In the event the banked KH is not exhausted it will carry over to the following month. Suppliers should understand this practice and examine current billing processes for net metered customers. In most cases, the customer's actual consumption and generation is made available in the PM (meter) loops of the 867MU/IU. Settlement process for excess customer generation varies by EDC. EGSs should contact each EDC directly to obtain this information.

New Jersey Notes

What document is sent if supplier elects NOT to receive detail interval data?

The standard method for interval accounts is to always pass interval data.

- JCP&L JCP&L will allow the summary option under the same guidelines they use in PA. JCP&L will provide detail interval data using 867IU with BB, SU, and BQ loops. If summary level is requested, will provide an 867MU with BB, SU, and PM loops (BPT04 will be "X5").
- Atlantic City Electric will allow a summary option. Atlantic City Electric will provide
 detail interval data using 867IU with BB, SU, and BQ loops. If summary level is
 requested, will provide an 867MU with BB, SU, PM and BC loops. (BPT04 will be
 "Y5")
- PSE&G will not support supplier having a choice to receive summary only.

Cancel / Re-bill when supplier is no longer active supplier

PSE&G: Before August 1st, 2016 (867 bill window close date)

PSE&G cannot provide consolidated billing for ESP's who are not supplier of record at the time the cancel / re-bill is processed. The process for Cancel/ Re-bill for an ESP who is not customer's current supplier of record is:

- PSE&G will cancel charges from 810(s) that correspond to the original 867(s) being canceled.
- Send 867(s) cancel
- Send 867(s) re-bill noting that customer billing option is DUAL.
- PSE&G will issue an 820 and reduce a future payment by the amount of the canceled 810(s) (on the scheduled date of the 820).
- TPS must Dual bill customer for the re-billed 867(s).

PSE&G: On or After August 1st, 2016 (867 bill window close date)

PSE&G implemented a system enhancement that will allow the billing option to remain consolidated for a cancel/rebill processed after the customer-supplier relationship has terminated.

- PSE&G will cancel charges from 810(s) that correspond to the original 867(s) being canceled.
- Send 867(s) cancel
- Send 867(s) rebill noting that customer billing option is CONSOLIDATED.
- PSE&G will issue an 820 and reduce a future payment by the amount of the canceled 810(s) (on the scheduled date of the 820).
- TPS must send in 810 charges for the rebilled 867(s).
- PSE&G will issue an 820 for the amount of the 810(s) for the rebilled 867(s).

Net Metering:

- PSE&G- Is currently using meters that have different channels to capture inbound and outbound usage and will send inbound and outbound at the detail level, and the net in the billed summary loop.
- Atlantic City Electric- Is currently using watt-hour meters that go both ways ultimately
 providing the net usage to the EDI process. This is for both the TPSs as well as the
 Clean Power providers.
- JCP&L-Is currently using a bi-directional meter for both the TPS's as well as the Clean Power suppliers. The bi-directional meter is providing the in and the out reading to the EDI process. The EDI summary loop will include the net usage.

Rockland Electric Company

Rockland Electric Company (RECO) in New Jersey does NOT follow this implementation guideline. RECO utilizes the New York State EDI standards.

14

Data Requirements for uniform support of Net Metered Customers:

NJ EDI Change Control Electric 016 mandates specific data requirements in support of net metered customers. Implementation by utility as follows...

- o Atlantic City Electric with new CIS (est. early 2015)
- o JCP&L 4Q 2014 (867MU/HU) and 1Q 2015 (867IU)
- o PSE&G currently supported, see below for additional PSE&G notes

Interval Metered - ACCOUNT Level Detail – all meters summarized (JCP&L, Atlantic City Electric)

- BB (Monthly Billed Summary) Loop reports the monthly billed summary usage for net metered customers.
 - When customer's consumption is greater than generation, the billed KH usage in the QTY02 will be reported as net KH (generation subtracted from total consumption).
 - When customer's generation is greater than consumption, the billed usage in the QTY02 will be reported as 0 (zero) KH.
 - 3. In either scenario, the QTY02 will never be signed negative.
- SU (Account Services Summary) Loop reports the summary usage for net metered customers by unit of measure.
 - When the customer's consumption is greater than generation, the KH will be reported as net consumption (QTY01 w/actual = QD or estimated = KA) with the total generation subtracted from total consumption.
 - When the customer's generation is greater than consumption, the KH will be reported as net generation (actual = 87 or estimated = 9H) with the total consumption subtracted from total generation).
 - 3. In either scenario, the QTY02 will never be signed negative.
- BQ (Account Services Detail) Loop reports the account level detail KH for net metered customers and will be looped for each unit of measure.
 - The QTY02 will report the net KH for ALL metered services being summed to the account level.
 - If the net KH for a given report period is generation, the QTY01 will be either '87' or '9H'.
 - However if the total account's customer generation is less than consumption for a single reporting period, only the net consumption is sent with QTY01 qualifier of as consumption, non-billable, incomplete, or unavailable.

NJ Clean Power Choice

Pursuant to Board Order, Docket No. QO18040393, the Clean Power Choice Program is coming to an end effective February 28, 2019. The EDI segments and data elements used for Clean Power Choice will remain in the EDI Implementation Guidelines to support any cancel/rebill scenarios or for future use in the event another program is established that may need these data elements.

Data Requirements for uniform support of Net Metered Customers (Continued):

Interval Metered – METER Level Detail – each meter reported separately. (used by PSE&G only)

- BB (Monthly Billed Summary) Loop reports the monthly billed summary usage for net metered customers.
 - When customer's consumption is greater than generation, the billed KH usage in the QTY02 will be reported as net KH (generation subtracted from total consumption).
 - When customer's generation is greater than consumption, the billed usage in the QTY02 will be reported as 0 (zero) KH. I
 - 3. In either scenario, the QTY02 will never be signed negative
- BO (Meter Services Summary) Loop –sums intervals by meter by unit of measure.
 Provides control totals for the sum of all intervals in the PM loops.
 - 1. PSE&G defaults meter role (REF*JH) to additive.
 - The customer's consumption KH is reported as a single QTY segment with the QTY01 of actual = QD or estimated = KA.
 - The customer's generation KH is reported as a single QTY segment with the QTY01 of actual = 87 or estimated = 9H.
 - 4. In either QTY segment, the QTY02 will never be signed negative
- PM (Meter Services Detail) Loop SINGLE meter reporting in/out flow. The meter loop will report the meter level detail KH for net metered customers via a single meter reporting both in and out flow. PM is looped for each meter, each unit of measure, and for KH, looped for in-flow and out-flow.
 - For the KH in-flow PM loop PSE&G reports the customers consumption for each given report period (interval reading). The quantity qualifier (QTY01) will be consumption reported as actual (QD) or estimated (KA).
 - For the KH out-flow PM loop PSE&G reports the customers generation for each given report period (interval reading). The quantity qualifier (QTY01) will be generation reported as actual (87) or estimated (9H).
 - 3. The meter role (REF*JH) is not sent.

The QTY02 will never be signed negative

16

Maryland Notes

What document is sent if supplier elects NOT to receive detail interval data?

If a supplier elects to receive only summary level information for an interval account, they will receive an 867MU document.

Note: BGE – The default is that an ESP will receive interval data at the summary level only.

- If an ESP wants to receive interval data at the detail level for AMI/Smart metered accounts, the ESP must submit "SI" in the LIN05 and "DETAIL" in the REF17.
- The ESP may request detail level interval data post enrollment by submitting a Change Request at a later date.
- For non-AMI/Smart metered interval accounts, the ESP will receive 867MU with the detail interval data posted to BGE's website.

If a supplier elects to receive detail and summary level information for an interval account, this is what they will receive, by utility.

- Delmarva & PEPCO Supplier will receive 867IU for all accounts (unless supplier has requested summary data). If the supplier elects NOT to receive detail interval data, PHI will send EDI 867MU (BB/SU/PM/BC loops) with BPT04 = 'X5' for accounts the supplier requested summary interval usage.
- BG&E For AMI/Smart metered accounts, will provide 867IU if requested as stated above. For non-AMI/Smart metered accounts, no 867IU will be sent and interval data will be provided on web; however, an 867MU will be provided for the Summary data.
- Potomac Edison Will provide detail interval data using 867IU with BB, SU, and BQ loops. If summary level is requested, will provide an 867MU with BB, SU, and PM loops (BPT04 will be "X5").

Looping of DTM segments in the PM (meter) loop when multiple meter exchanges occur during the same service period

If the event the utility experiences multiple meter exchanges during the same service period, the following format applies. In the rare event a meter exchange occurs and a day or more go by without the new meter being installed, the meter party cannot have a 'gap' in the service period. By design, the consumption was never intended to have any break in the dates

867IU - PTD*BO, PTD*PM and PTD*PL Loops - Position 020

The PTD*BO and PTD*PM (or PTD*PL) loops will be separate for each meter throughout the multiple meter exchange process.

Sample provided in the back of this implementation guideline.

Requirements for uniform support of Net Metered Customers

Interval Metered - ACCOUNT Level Detail – all meters summarized (BGE, PHI & PE)

- BB (Monthly Billed Summary) Loop reports the monthly billed summary usage for net metered customers.
 - When customer's consumption is greater than generation, the billed KH usage in the QTY02 will be reported as net KH (generation subtracted from total consumption).
 - When customer's generation is greater than consumption, the billed usage in the QTY02 will be reported as 0 (zero) KH.
- 3. In either scenario, the QTY02 will never be signed negative.
- SU (Account Services Summary) Loop reports the summary usage for net metered customers by unit of measure.

- When the customer's consumption is greater than generation, the KH will be reported as net consumption (QTY01 w/actual = QD or estimated = KA) with the total generation subtracted from total consumption.
- When the customer's generation is greater than consumption, the KH will be reported as net generation (actual = 87 or estimated = 9H) with the total consumption subtracted from total generation).
- 3. In either scenario, the QTY02 will never be signed negative.
- BQ (Account Services Detail) Loop reports the account level detail KH for net metered customers and will be looped for each unit of measure.
 - The QTY02 will report the net KH for ALL metered services being summed to the account level.
 - If the net KH for a given report period is generation, the QTY01 will be either '87' or '9H'.
 - However if the total account's customer generation is less than consumption for a single reporting period, only the net consumption is sent with QTY01 qualifier of as consumption, non-billable, incomplete, or unavailable.

Net Metering – Excess Customer Generation

Maryland legislation PUA 7-306 states the Electric Company, not the Electricity Supplier, must pay the customer for accrued net excess generation on an annual basis (April meter read). Furthermore the rule states... "For customers served by an electricity supplier, the dollar value of the net excess generation shall be equal to the generation or commodity rate that the customer would have been charged by the electricity supplier multiplied by the number of kilowatt–hours of net excess generation." To support this requirement, each LDC maintains customer generation balance and for any excess generation during the annual true-up, the customer is credited based on their LDC or EGS rate.

Net Metering – banked KH adjustment for excess customer generation

Applies to Potomac Edison, BG&E, Delmarva MD and PEPCO MD

The LDC will apply excess generation KH from a prior month(s) into the billed quantity (D1) segment of the billed summary (BB) loop of the 867MU/IU transaction sets reducing billed consumption. When this occurs, the sum of the metered services (PM) loops will not equal the KH being reporting in the BB loop. In the event the banked KH is not exhausted it will carry over to the following month. In conjunction with Maryland excess generation rules, the EGS should understand this banked rollover practice and examine current billing processes for net metered customers.

Example of banked KH adjustment (non-TOU customers)...

Month 1 – Customer consumes 200KH and generates 500KH, net is excess generation of 300KH.

The utility sends 0KH in BB loop. Supplier would bill customer 0 KH

Month 2 – Customer consumes 500KH and generates 150KH, net is consumption of 350KH.

The utility rolls banked excess of 300KH from prior month and applies to current month bill. Utility and supplier bill customer for 50KH (350KH – 300KH)

Settlement process for excess customer generation varies by LDC. Suppliers should contact each LDC directly to obtain this information.

Demand Reporting – Multiple suppliers during same billing period The following describes each utility's process for reporting Demand (K1) when multiple suppliers serve the same customer during the same billing period.

BGE

The demands passed in each 867MU/IU reflects the highest demand values that occurred during each supplier's sub-period, NOT the entire billing period. Demand values for each sub-period are NOT prorated.

BB Loop / QTY*D1 - The highest overall demand (regardless of TOU Peak) that occurred in the supplier's sub-period. Although coded "D1", this may not be the highest overall demand billed by BGE for the entire billing period.

BB Loop / QTY*QD - The highest recorded On Peak demand that occurred in the supplier's sub-period (This may or may not be the highest overall billed "D1" demand).

Potomac Edison (FirstEnergy)

Will send the peak demand for the entire billing period in all 867s created for the period. If the customer's peak demand is 10.4 K1 for the whole billing period, all suppliers would receive 10.4K1 in their 867.

PHI (Delmarva MD & PEPCO MD)

Will prorate demand for the entire period based on the number of days served by the supplier.

If max demand for entire period is 90 and one supplier serves 15/30 days, PHI will send that supplier 45, if another supplier serves 10/30 days, will send that supplier 30, and if utility has remaining 5/30 days, they will have 15. PHI will implement this to be consistent with all meter types and to ensure the customer is never charged more than the maximum.

MD Supplier Consolidated Billing (SCR) MD SCB Usage Considerations:

MD SCB Bill Option includes a Purchase of Receivables process in which the Supplier is responsible for creating the consolidated customer bill utilizing information obtained via numerous EDI transactions including an 810 Invoice, 867MU or 867IU usage transactions, and the 814 Enrollment response and change transactions sent to the Supplier by the Utility. The following changes to the 867IU are to ensure the Supplier has access to data currently printed on the Utility bills that is required to be present on the MD SCB bill, as well as additional information that provides support for explaining Utility charges.

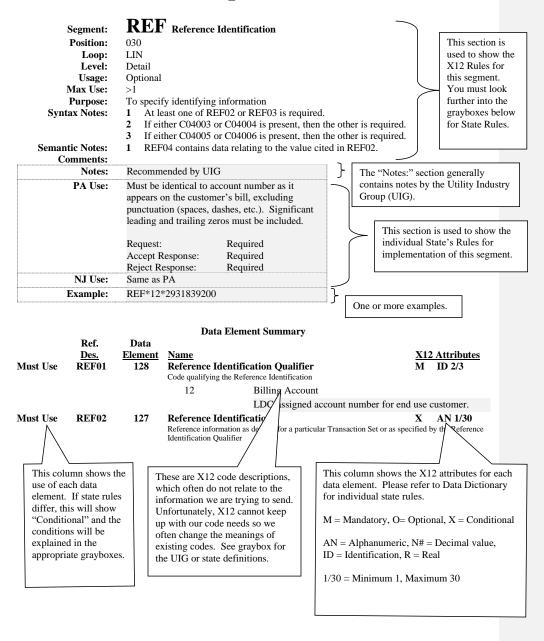

Bill Presentment – PTD=BP

Utilities will provide Meter Beginning Reading and Meter Ending Reading values on the MEA05 and MEA06 when available for the Supplier to include on the Customer SCB bill. There are some instances where this information is not currently provided consistently on the PM loops. The LDC Rate Description will be provided in a new REF*K6 segment for all MD SCB accounts.

Utilities will also provide the following information when available and appropriate: MU=Meter Multiplier (The meter multiplier will always be passed even when equal to 1.0). ZA=Power Factor

CO=Transformer Loss Multiplier

ST Transaction Set Header Segment:

Position:

Loop:

Heading Mandatory Level: Usage:

Max Use:

Purpose:

To indicate the start of a transaction set and to assign a control number

Syntax Notes: Semantic Notes:

1 The transaction set identifier (ST01) is used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810

selects the Invoice Transaction Set).

| Comments: |
|------------------|
| Committees. |

| PA Use: | Required |
|----------|-----------------|
| NJ Use: | Required |
| DE Use: | Required |
| MD Use: | Required |
| Example: | ST*867*00000001 |

 ${f BPT}$ Beginning Segment for Product Transfer and Resale Segment:

Position: Loop:

Level: Usage:

Heading Mandatory

Max Use:

Syntax Notes:

If either BPT05 or BPT06 is present, then the other is required.

Semantic Notes:

BPT02 identifies the transfer/resale number. BPT03 identifies the transfer/resale date.

BPT08 identifies the transfer/resale time.

BPT09 is used when it is necessary to reference a Previous Report Number.

April 30, 2024

Version 6.9

DR Datalog Report

Mixed Values - transaction contains data for both

interval and non-interval meters

KH Proposal Support Data

Meter Changeout when Meter Agent Changes - Interval Usage (used to tell the receiver that this is a partial usage statement. The billing agent must combine the KH usage and the MV usage to determine total usage for period.

Conditional BPT07 306 Action Code

tion Code O ID 1/2
Code indicating type of action

F Final

Code to indicate this is the final usage data being sent for this customer. Either the customer account is final with the LDC or the customer switched to a new ESP. **NJ PSE&G:** PSE&G only sends "F" on a customer account final. They do not send an "F" on a customer

switch.

Conditional BPT09 127 Reference Identification O AN 1/30

Reference information as defined for a particular Transaction Set or as specified by the Reference Identification Qualifier

When BPT01 = 01 (cancel), this element is required and should contain the transaction identification number from BPT02 of the transaction that is being cancelled.

| Segment: | DTM | Date/Time Reference (649=Document Due Date) |
|----------|-----|---|
|----------|-----|---|

Position: Loop:

050

Heading Optional Level: Usage: Max Use:

10

Purpose:

To specify pertinent dates and times

1 At least one of DTM02 DTM03 or DTM05 is required.

2 If DTM04 is present, then DTM03 is required.

3 If either DTM05 or DTM06 is present, then the other is required. Syntax Notes:

| Semantic Notes: |
|-----------------|
| Commonta |

| Comments: | | | |
|-----------|--|--|--|
| Notes: | Required for Bill Ready Consolidated Billing where the meter reading party sends an 867 to the non-billing party, who calculates their own portion of the bill and sends the 810 to the billing party. Must be expressed in Eastern Prevailing Time. Not provided on cancel transaction. | | |
| PA Use: | Required for Bill Ready, not used in Rate Ready and Dual Billing Note: For ESP Consolidated Billing, the document due date will be set according to the specific LDC bill ready implementation. | | |
| NJ Use: | Required for Bill Ready, not used in Rate Ready and Dual Billing | | |
| DE Use: | Required for Bill Ready, not used in Rate Ready and Dual Billing | | |
| MD Use: | Required for Bill Ready, not used in Rate Ready and Dual Billing | | |
| Examples: | DTM*649*19990131*2359 | | |

Data Element Summary

| Must Use | Ref. <u>Des.</u> DTM01 | Data Element 374 | Name Date/Time Qualifier Code specifying type of date or time, or both date and time | | Attributes M ID 3/3 | |
|----------|------------------------------|------------------------|---|---|------------------------|--|
| | | | 649 | Document Due | | |
| | | | | The date that the non-billing party must transaction back to the billing party. | | |
| | | | | If a file is received by the billing party after the da and the billing party cannot process it, they must the non-billing party (via email, phone call, or any means). | | |
| Must Use | DTM02 | 373 | Date Date expressed as CCYY | · | X DT 8/8 | |
| Must Use | DTM03 | 337 | Time X TM 4/8 Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours $(00-23)$, M = minutes $(00-59)$, S = integer seconds $(00-59)$ and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths $(0-9)$ and DD = hundredths $(00-99)$ | | | |
| | | | HHMM format | | | |

Version 6.9

MEA Measurements (NP=Percent Participation) Segment:

Position:

Loop:

Purpose:

Level: Heading Usage: Optional Max Use: 20

To specify physical measurements or counts, including dimensions, tolerances, variances,

and weights (See Figures Appendix for example of use of C001)

Syntax Notes: At least one of MEA03 MEA05 MEA06 or MEA08 is required.

If MEA05 is present, then MEA04 is required. If MEA06 is present, then MEA04 is required.

If MEA07 is present, then at least one of MEA03 MEA05 or MEA06 is required.

Only one of MEA08 or MEA03 may be present.

Semantic Notes: MEA04 defines the unit of measure for MEA03, MEA05, and MEA06.

When citing dimensional tolerances, any measurement requiring a sign (+ or -), or **Comments:**

any measurement where a positive (+) value cannot be assumed, use MEA05 as the

negative (-) value and MEA06 as the positive (+) value.

| PA Use: | Required if less than 100% | |
|----------|-----------------------------|--|
| NJ Use: | Not used | |
| DE Use: | Not used | |
| MD Use: | Only used by Potomac Edison | |
| Example: | MEA**NP*.66667 | |

Data Element Summary

| Must Use | Ref. <u>Des.</u> MEA02 | Data Element 738 | | | Attributes O ID 1/3 n a measurement applies | |
|----------|------------------------------|------------------------|------------------|---|---|--------|
| | | | | | e 314 | |
| Must Use | MEA03 | 739 | Measurement Valu | e | X | R 1/20 |

The value of the measurement

The whole number "1" represents 100 percent. Decimal numbers less than "1"

represent percentages from 1 percent to 99 percent.

 $REF_{\rm \,Reference\,\,Identification\,\,(BLT=Billing\,\,Type)}$ Segment:

Position: 120 N1 Loop: Heading Optional Level: Usage: Max Use: 12

To specify identifying information Purpose:

Syntax Notes:

At least one of REF02 or REF03 is required.

If either C04003 or C04004 is present, then the other is required. 2 If either C04005 or C04006 is present, then the other is required. REF04 contains data relating to the value cited in REF02.

Semantic Notes: Comments:

PA Use:

Note: Some utilities may not be able to comply with this until later since this was added

so close to the 4010 implementation date.

NJ Use: Optional DE Use: Optional MD Use: Optional REF*BLT*LDC Example:

| | | | Data Ele | ment Summary | | |
|----------|------------------------------|------------------------|--|--|-----------------|-----------------------------|
| Must Use | Ref. <u>Des.</u> REF01 | Data Element 128 | | ification Qualifier reference Identification | <u>X12</u> M | 2 Attributes ID 2/3 |
| | | | BLT | Billing Type | | |
| | | | | Identifies whether the bill is consolidat ESP, or whether each party will render See REF02 for valid values. | - | |
| Must Use | REF02 | 127 | Reference Identi Reference information Identification Qualifie | n as defined for a particular Transaction Set or as spec | X cified b | AN 1/30 by the Reference |
| | | | When REF01 is I | BLT, valid values for REF02 are: | | |

LDC - The LDC bills the customer ESP - The ESP bills the customer

DUAL - Each party bills the customer for their portion

Note: In New Jersey, only LDC and DUAL are valid.

 $\pmb{REF} \ \text{Reference Identification (PC=Bill \ Calculator)}$ Segment:

Position: 120 N1 Loop: Heading Level: Optional Usage: Max Use: 12

Purpose: To specify identifying information

Syntax Notes: At least one of REF02 or REF03 is required.

If either C04003 or C04004 is present, then the other is required. 2 If either C04005 or C04006 is present, then the other is required. REF04 contains data relating to the value cited in REF02.

Semantic Notes: Comments:

PA Use:

Note: Some utilities may not be able to comply with this until later since this was added

so close to the 4010 implementation date.

NJ Use: Optional DE Use: Optional MD Use: Optional REF*PC*LDC Example:

Data Element Summary

| Must Use | Ref. <u>Des.</u> REF01 | Data Element 128 | Name Reference Identification Qualifier Code qualifying the Reference Identification | | X12 Attributes M ID 2/3 |
|----------|------------------------------|------------------------|--|--|----------------------------|
| | | | PC | Production Code | |
| | | | | Identifies the party that is to calcubill. | ılate the charges on the |
| Must Use | REF02 | 127 | Reference Ide | entification | X AN 1/30 |

Reference information as defined for a particular Transaction Set or as specified by the Reference Identification Qualifier

When REF01 is PC, valid values for REF02 are:
LDC - The LDC calculates the charges on the bill (Rate Ready)

DUAL - Each party calculates its portion of the bill (Dual or Bill Ready)

| IF | | THEN | | | |
|-----------|-------------|-------------|----------------------|-------------|--|
| Bills the | Calcu | ılates | Billing Party | Calc. Party | |
| Customer | LDC Portion | ESP Portion | REF*BLT | REF*PC | |

| | | | HHMM format | | | |
| Must Use | DTM04 | 623 | Time Code | a time. In accordance with International Standards Orga | O | ID 2/2 |

Code identifying the time. In accordance with International Standards Organization standard 8601, time can be specified by a+or-and an indication in hours in relation to Universal Time Coordinate (UTC) time; since + is a restricted character, + and - are substituted by P and M in the codes that follow

The time code must accurately provide the time zone when the daylight savings time starts and ends if the meter is adjusted for daylight savings time. If meter is not adjusted for daylight savings time, the time code will always reflect Eastern Daylight Time which will be interpreted as prevailing time.

ED Eastern Daylight Time ES Eastern Standard Time

BC Unmetered Services Summary

Note:

Refer to the "PTD Loops Definition" section earlier in this document for an explanation of this specific PTD Loop.

DTM Date/Time Reference (150=Service Period Start) Segment:

020 PTD **Position:** Loop: Detail Level: Usage: Optional Max Use: 10

Purpose:

To specify pertinent dates and times

1 At least one of DTM02 DTM03 or DTM05 is required.

2 If DTM04 is present, then DTM03 is required. Syntax Notes:

If either DTM05 or DTM06 is present, then the other is required.

Semantic Notes:

Comments:

| PA Use: | Not Used |
|----------|--|
| NJ Use: | Not Used |
| DE Use: | Not Used |
| MD Use: | Required if there are unmetered services on this account |
| Example: | DTM*150*19990101 |

| | Ref. | Data | | | |
|----------|--------------------|---------|---|---------------|---------|
| | Des. | Element | <u>Name</u> | Att | ributes |

QTY Quantity Segment:

Position: 110 Loop: QTY Level: Detail Usage: Optional

Max Use: To specify quantity information **Purpose:**

Syntax Notes:

At least one of QTY02 or QTY04 is required.
 Only one of QTY02 or QTY04 may be present.

Semantic Notes: QTY04 is used when the quantity is non-numeric.

Comments:

| Comments. | |
|-----------|--|
| Notes: | There will be one QTY loop for each of the QTY03 Units of Measurement listed below for each meter that is measured on this account. |
| | If there are 2 meters on the account, and one measures KWH and KW, and the other measures just KWH, there will be 3 PTD01=PM loops. |
| | If a meter measures total usage, as well as on-peak and off-peak, there will be three QTY loops sent within one PTD01=PM loop. The MEA segment that follows each QTY will specify which time of use the QTY applies to. |
| PA Use: | Not Used |
| NJ Use: | Not Used |
| DE Use: | Not Used |
| MD Use: | Conditional: Required for MD SCB if present on corresponding 867MU PTD-PM Loop and when the REF*MG Meter number = UNMETERED and the REF*K6 Print Summary Box = Y. (REF*MG*UNMETERED and REF*K6*Y*Unmetered Street Lighting) One QTY Loop is required for each consumption quantity per unmetered device. The |
| | billable quantity is the total unmetered consumption per device type for the billable period. |
| Example: | QTY*QD*22348*KH QTY*QD*14*K1 (If meter measures both, you will have two QTY loops) QTY~QD~2000~EA^^20^KH |

Commented [BS1]: MD CC 076v2 - merged invalid 2nd QTY from CC and SCB Group Redline to this QTY.

Segment: MEA Measurements

Position: 160 Loop: QTY Level: Detail Usage: Optional Max Use: 40

Purpose: To specify physical measurements or counts, including dimensions, tolerances, variances,

and weights (See Figures Appendix for example of use of C001)

Syntax Notes: 1 At least one of MEA03 MEA05 MEA06 or MEA08 is required.

If MEA05 is present, then MEA04 is required.If MEA06 is present, then MEA04 is required.

If MEA07 is present, then at least one of MEA03 MEA05 or MEA06 is required.

5 Only one of MEA08 or MEA03 may be present.

Semantic Notes: 1 MEA04 defines the unit of measure for MEA03, MEA05, and MEA06.

Comments: 1 When citing dimensional tolerances, any measurement requiring a sign (+ or -), or

any measurement where a positive (+) value cannot be assumed, use MEA05 as the negative (-) value and MEA06 as the positive (+) value.

| Notes: | The MEA segment is sent for each QTY loop. The MEA will indicate the "time of use" that applies to the QTY. If meter readings are included in the MEA, they will indicate the "time of use" that the meter readings apply to. |
|-----------|--|
| PA Use: | Not Used |
| NJ Use: | Not Used |
| DE Use: | Not Used |
| MD Use: | Conditional: Required for MD SCB if present on corresponding PTD-PM Loop and to provide additional information for bill presentment purposes. MEA segment must contain MEA05 and MEA06 Meter Beginning Reading and Meter Ending Reading values on KH reads. BGE does not provide on TOU reads, only total usage segments. |
| Examples: | MEA*AE*PRQ*589.00000*KH*89466.00000*90055.00000*51 MEA*BO*RUD*243342*KH***51 |

MEA Measurements (MU=Meter Multiplier) Segment:

Position: Loop: QTY Level: Detail Usage: Optional

Max Use:

Purpose: To specify physical measurements or counts, including dimensions, tolerances, variances, and weights (See Figures Appendix for example of use of C001)

Syntax Notes: At least one of MEA03 MEA05 MEA06 or MEA08 is required.

If MEA05 is present, then MEA04 is required. If MEA06 is present, then MEA04 is required.

If MEA07 is present, then at least one of MEA03 MEA05 or MEA06 is required.

Only one of MEA08 or MEA03 may be present.

Semantic Notes: MEA04 defines the unit of measure for MEA03, MEA05, and MEA06.

When citing dimensional tolerances, any measurement requiring a sign (+ or -), or **Comments:**

any measurement where a positive (+) value cannot be assumed, use MEA05 as the

negative (-) value and MEA06 as the positive (+) value.

| PA Use: | Not Used |
|----------|---|
| NJ Use: | Not Used |
| DE Use: | Not Used |
| MD Use: | Conditional: Required for MD SCB if present on corresponding PTD-PM Loop and to provide additional information for bill presentment purposes. Will be added in the BP Loop when Meter Multiplier = 1 or missing in the corresponding PM Loop. |
| Example: | MEA**MU*2 |

| | Ref. | Data | | | | |
|----------|-------|---------|---|--------|--------------|--|
| | Des. | Element | <u>Name</u> | Att | ributes | |
